

Entegard® | 

YOUR CHOICE FOR HEALTHY SWINE

Bioseutica the global leader in lysozyme has developed Entegard®, an innovative range of products, designed to overcome the challenges of livestock RWA (Raised Without Antibiotics). Administered via feed or drinking water Entegard® helps to maintain a healthy gut flora and gut barrier function by sustaining the structural integrity of the intestinal wall through its direct and natural antibacterial activity. This leads to optimum nutrient absorption with positive impact on health and development of livestock. The Entegard® formulations are designed to provide protection and restore microbiological balance. Lysozyme is its active component.

► WHY ENTEGARD®

- Entegard® improves feed conversion ratio (FCR) in swine in RWA operations
- Entegard® promotes clearance of microbial debris, improving gastrointestinal health
- Entegard® enhances feed efficiency and growth performances indices
- Entegard® supports the digestive functions and overall health

► ENTEGARD® IS EASY TO USE

Entegard® is available in two product formulations:

- Entegard® WS: A dry powder formulation, which is readily soluble in water. It can be administered simply by mixing in with mash feed, or by dissolving in the drinking water. It can also be administered as post-pellet spray.
- Entegard® PLUS: An encapsulated formulation with high thermostability, suited for addition to feed premixes prior to pelletization

ENTEWARD® is produced with highest standards that guarantee traceability to source.

HIGH VALUE INGREDIENTS AND PHARMACEUTICALS FROM NATURAL SOURCES

Bioseutica is an integrated, specialty pharmaceutical group dedicated to the development of the highest quality ingredients, using natural, renewable sources for the healthcare, food and feed industries. We are committed to scientific research leading to innovative products and proprietary technologies. Bioseutica focuses on the global supply of the highest quality bioactive proteins, including egg derived proteins, such as lysozyme, avidin or ovotransferrin, pancreatic enzymes and specialty products, food ingredients and feed additives, designed for antibiotic free livestock, such as, poultry and swine.

Bioseutica's manufacturing processes are built on high-end, cutting-edge proprietary technology and allow us to produce ingredients of highest purities in our manufacturing facilities in Canada and Europe.

Bioseutica's diversified range of products, which include egg derived proteins, pancreatic enzymes, and specialty end products for the food & feed industry are sold to companies worldwide. In addition, Bioseutica focuses on licensing related intellectual property. Bioseutica's organisation enables it to efficiently deliver quality products, custom designed solutions and timely customer service to clients globally.

Bioseutica international management team strives to be on top of current consumer demands and industrial market trends worldwide.
